

## Release Note for Port Knocking Tool

|                          |  |
|--------------------------|--|
| Firmware Version:        | 1.4  |
| Release Type:            | Regular – Upgrade recommended when convenient, as it includes general improvements and optimizations |
| Applied Operation System | All  |

The Port Knocking Tool is an application designed to work with Vigor Routers. When Port Knocking protection is enabled on a Vigor Router, the administrators can use this tool to perform the required 'knocks' and gain access to the router's management interface.

### New Features

- Add functionality to invoke the port knocking tool via command-line instructions.
- Support TOTP encryption and decryption during profile export and import.

### Improvement

- Improved: Improve the OTP code copy feature by removing the pop-up alert.

### Known Issue

- None.

### Note

- All entered data is securely stored in your browser's local storage and will not be transmitted to any external servers, such as [www.draytek.com](http://www.draytek.com).
- The profile settings for the Port Knocking tool are saved in the browser cache. Please note that these settings will be lost if you use Incognito mode or clear the browser cache. It is recommended that you record the settings using a separate application in advance.
